

Work Experience

Senior Software Engineer	Gurtam Vilnius, Lithuania	Jan 2024 – Current
- Designed and led the development of a unified billing platform for 5 products, reducing duplicated logic by 80% and establishing a shared backend architecture (Python, PostgreSQL, Kubernetes), increasing delivery speed by 30%. - Standardized billing, payment, and reconciliation workflows across 4+ product teams by driving end-to-end system design and cross-team alignment with product and finance stakeholders, cutting integration inconsistencies and support escalations by ~30% - Reduced reconciliation time by 60% by building automated financial pipelines integrating bank statements and payment providers (Stripe, PayPal), improving accounting accuracy and eliminating manual intervention. - Architected event-driven payment workflows (webhooks, async processing) that reduced manual operations by 70% and improved system reliability and observability (Python, REST APIs, messaging patterns). - Improved financial reporting accuracy by 40% by building data validation and reporting pipelines that enforced schema checks, reconciled discrepancies across sources, and produced consistent, auditable financial data flows.		
Senior Software Engineer	UAB Sandas Vilnius, Lithuania	Jun 2018 – Jan 2024
- Delivered a unified sales, billing, and field-service platform (TypeScript, Python, Odoo, PostgreSQL), eliminating fragmented processes and saving 5,400+ human hours within the first 3 months through automation and workflow consolidation. - Reduced invoice processing time by 75% (8→2 minutes) by building a rules-driven billing engine and automating generation, approval, and validation workflows (Python, Odoo, PostgreSQL). - Eliminated ~1,200 hours/month of manual coordination by developing a tablet-first dispatch and routing system with real-time scheduling, stock assignment, and e-signatures for 40 field teams (Python, Odoo, RabbitMQ, PostgreSQL).		
Software Engineer	Draugiski sprendimai Vilnius, Lithuania	Jun 2017 – Jun 2018
- Reduced manual data entry by ~70% and cut order sync errors by ~50% by extending Odoo ERP with robust Shopify integrations (Python, Odoo, Shopify API) to automatically synchronize products and orders. - Cut manual pricing work by ~60% and reduced pricing update time from days to hours by implementing advanced price-list logic in Odoo (Python, PostgreSQL) to centralize and automate pricing across large product catalogs.		

Tools and Technologies

Backend:	Python (FastAPI, Flask, Django) TypeScript
Data:	PostgreSQL
Messaging:	RabbitMQ Kafka MQTT
Infra:	Kubernetes, Docker, CI/CD
Observability:	Grafana Prometheus Loki Sentry OpenTelemetry

Education

B.Sc. in Computer Science, Vytautas Magnus University.	2015 – 2019
