

Anton Prusakov

+37067617140 | grfokpr@gmail.com | <https://www.linkedin.com/in/antonprusakov> | Vilnius, Lithuania

Accomplishments

- 8+ years of commercial experience as a Python software engineer, specializing in ERP systems development
- Led the full development lifecycle, from product requirement gathering to scalable architecture design
- Built and maintained core financial features including sales, invoicing, and payment provider integrations
- Delivered robust, well-tested features with a strong emphasis on code quality and maintainability
- Automated CI/CD pipelines to streamline testing, deployment, and delivery workflows

SKILLS

- Programming Languages: Python, TypeScript
- Frameworks & Tools: FastAPI, Flask, Django, Odoo, Backbone.js, jQuery, Git, PostgreSQL, RabbitMQ
- DevOps & Cloud: Kubernetes, Docker, CI/CD, Grafana, Prometheus, Loki, Sentry, OpenTelemetry
- Languages: English, Lithuanian, Ukrainian, Russian

WORK EXPERIENCE

Gurtam

Vilnius, Lithuania

Senior Python Developer

January 2024 - Present

- **Architected and launched** a unified billing and invoicing platform for 5 products using **Python**, **PostgreSQL**, replacing fragmented logic with a shared backend, standardized data model, and reusable components eliminating duplicated workflows.
- **Automated financial reconciliation** by integrating invoice, payment, and credit matching with real-time bank statement imports, reducing reconciliation time by **60%** and eliminating upload errors.
- **Implemented Stripe and PayPal integrations** across all products, enabling automated invoice delivery, instant payment processing, and streamlined refund handling, cutting manual operations by **70%**.
- **Enhanced data accuracy and reporting** by introducing centralized financial data flows and validation pipelines, improving reliability for accounting and management decision-making.

Sandas

Vilnius, Lithuania

Senior Python Developer

June 2018 – January 2024

- Led the design and delivery of a comprehensive sales, billing, and field-service platform resulting in a savings of 5,400 human hours within the first three months after launch.
- Automated billing and invoicing workflows by implementing a rules-driven engine, reducing average invoice processing time by 75% (from 8 minutes to 2 minutes)
- Created a tablet-first technician dispatch and routing application, enabling field teams to assign stock, complete e-signatures, and receive dynamic schedules, saving 1.5 human hours per day per team across 40 technician teams (about 1,200 hours per month)

Draugiski sprendimai

Vilnius, Lithuania

Python Developer

June 2017 – June 2018

- Extended Odoo ERP with Shopify connector modules, automating synchronization of product catalogs and orders between Odoo and Shopify.
- Developed advanced price-list calculation and assignment logic within Odoo, reducing manual pricing adjustments.

Education

Vytauto Didžiojo universitetas

Vilnius, Lithuania 2013 – 2017

Bachelor GPA: Computer Science
